

Spool Holder Attachment

The days of stepping on wet, dirty, twisted, tangled, pain-in-the-neck welding rod are over!

- The Spool Holder assembly mounts directly to extrusion welder drive motor housing in seconds.
- The welding rod spool mounts to a hub that spins smoothly on self-lubricating bronze bushings.
- A quick release shaft collar locks the narrow spool in place and allows it to spin freely.
- Simply attach any drill to the end of the shaft and load up to 6.5 pounds of 4 or 5 mm welding rod from standard 15 to 30 pound spools onto the smaller spools supplied by Demtech.
- The extrusion welder feeds rod directly from spool for continuous, no hassle operation.
- Complete Spool Holder assembly, including a full spool of rod, weighs only 8.2 pounds!
